

GRANUSIL[®]

High-Performance Industrial Silica

Develop robust, finer products

GRANUSIL[®] high-performance silica is the new industry standard for developing robust, finer products. Because we have one of the industry's largest mine footprints, we originate this mineral solution at the source and control the process all the way to your specified destination. You can rely on the sand you need for the product quality you demand when you collaborate with our team.

Superior Processing.
Enhanced Material.
On-time delivery.

Achieve predictable performance

Our pure, monocrystalline quartz sand enables you to achieve predictable performance in a variety of industrial and contractor-mixed applications. The sand is processed and sized under rigorous statistical and QA programs. The consistent, uniform grain shape and particle-size distribution have first-rate placement, compaction, and mechanical properties. This excellent sand, which resists abrasion in traffic-excessive applications, is stable in high-solids emulsions, elastomers, and cemented and cementitious systems.

Rely on a strategic distribution network

Customers rely on GRANUSIL sand and all of our mineral and material products to arrive on time via a strategic distribution network. Well-balanced rail access offers flexibility to choose the most cost-effective combination of plant, rail, trucking, and terminal. This network ensures up-to-the-minute delivery.
