Golf Sand

## Great golf demands BESTSAND™

BESTSAND™ has long been known as a leading name in golf maintenance materials. With the unsurpassed quality and playability of our bunker sand, golf mixes, and topdressing sand, it's easy to see why. Now, with BESTSAND, you have a new tool in your arsenal: the superior service and consistent support of our team. When you team up with us, you're supported by a rich legacy of credibility and performance. Our meticulously engineered top-quality sand and silica products have become legends of the industry, designed to accurately meet your golf facility needs.

Trusted by  
Top 100 US  
Golf Courses

### Bunker sand

**SIGNATURE 900** - Manufactured by crushing silica stones, this angular bunker sand adheres to the steepest bunker faces giving you the highest penetrometer reading for stable ball support, while still allowing for excellent playability. Superior quality, consistent texture, and white in color, SIGNATURE 900 delivers the consistency you demand, by providing the look and standard of play your golfers demand year after year.

**SIGNATURE 700** - This blend gives you the versatility to maintain the firmness you desire for championship play or for the everyday golfer. No matter the characteristics you specify, you'll have shot-after-shot consistency with a championship level look.

**SIGNATURE 500** - High-quality bunker sand that delivers firm ball support and consistency season after season. An off-white color reduces glare and gives this sand a natural, premium look. Its consistent size, texture, and quality ensure long-term playability and quick draining to eliminate puddles and crusting.

### Construction and maintenance

**Construction Mixes** - Our BESTSAND construction mixes put facilities in top playing shape with consistent particle size and infiltration rates. Whether it's the construction of a new course or a renovation, we can custom blend a mix to meet the expectations of superintendents. Our state-of-the-art custom blending facility yields absolutely precise mixes that conform to USGA specifications for superior quality and playability.

**Topdressing Sand** - Our wide variety of topdressing sands keep greens, fairways, and tees healthier, more playable, and easier to maintain. Our high-purity silica sand is the perfect fit for frequent light brush-in applications to avoid disrupting play and amending your current root zone for better performance.

**Divot Mixes** - A custom formulated divot mix of sand, topsoil, and peat that can be blended to meet the needs of your playing surface. It's the ideal fix for divots on both courses and practice fields. Our sand's permeability provides an excellent environment for proper seed development; nutrients may be added to mixes for enhanced grow-in.
