sand

GRANUSIL HS paver base

Firm compaction: Our angular paver base^{1,2}—sand, slag, or limestone—compacts for a firm subsurface whether a patio, walkway, or driveway. We have the proper mix of smaller fines and larger aggregate that is free from debris for fast and easy screeding. This is the material to use for a level surface and foundation, ensuring a beautiful project.

GRANUSIL HS jointing and bedding sand

Higher standards, cleaner sand: Count on us for washed, clean jointing and bedding sand^{1,2} that is symmetrically shaped for the finish your customers desire. This material, which is free from foreign matter, is natural or manufactured from crushed sandstone. The right sand gradation saves time and money with easy sweeping unlike other material with larger aggregate that tends to clog the joints and prevent the sand from completely filling the joints.

¹ASTM C33: Standard Specification for Concrete Aggregates

²ASTM C144: Standard Specification for Aggregate for Masonry
