

Black Lab® Blend

Epoxy Flooring Aggregate

Black Lab® Blend

Premium Aggregate

Black Lab Blend premium aggregate enhances epoxy flooring durability. You will see and experience the durability difference with our proprietary product used in 1/4-inch trowel-applied floors.

Let's look at the aggregate's sand base, a combination of interlocking round and angular grains. We developed this base to yield remarkable compressive strength and to reduce the resin and hardener needed during installation. Altogether, these factors ensure the flooring durability you require.

With the rigorously engineered, custom additives, the application is smooth and easy with less drag and dust. This premium aggregate includes our exclusive dust-suppression technology. The installation team will appreciate a renewed commitment to an improved working environment where the dust is significantly less than on jobs using a standard aggregate.

**Why don't you reach out now
for an upcoming project?**

- Enhanced durability
- ...
- Smoother troweling
- ...
- Seamless surface
- ...
- Reduced dust

Leverage our strategically located plants

Black Lab Blend is shipped rapidly and reliably throughout North America. Each of our strategically located plants near Chicago, Cleveland, and Houston is serviced by transportation lines that quickly move product to you. With this footprint, we also receive raw materials and components into our plants without delay. Now, you can collaborate with a cost-efficient, time-efficient company that understands logistics and product quality are equally important.

- Black Lab plants
- Covia's industrial plants, excluding Black Lab

"I began working with Black Lab 25 years ago. I like the blend of aggregate, which has had good results: works well when troweling; not sticky. The dust suppression helps tremendously."

25-year Black Lab customer

"I've looked at other suppliers, but they don't seem to match up in terms of the overall value and service."
