

MINEX[®]

Functional Filler

The industry standard for outdoor/indoor durability and formulation versatility

MINEX[®] fillers are produced from Nepheline syenite, a naturally occurring sodium-potassium-aluminum silicate without reportable free crystalline silica. MINEX micronized functional fillers and extenders are proven performance enhancers in a broad range of paints, coatings, adhesives, sealants, and inks. Multiple grades are available to provide optimal performance in a variety of applications.

MINEX uniquely combines high-performance and regulatory compliance, is sustainably produced, urgently and reliably delivered, serviced and supported with our customers continued growth and success in mind.

HIGH
PERFORMANCE
AND
REGULATORY
COMPLIANCE

- High volume solids/lowest viscosity in solventborne industrial coating for lower VOC and increased coverage
- Rapid dispersion in both aqueous and solvent based systems
- Enhanced UV, color fade and chalk resistance in all resin systems
- Resists yellowing, chemical resistance with less dirt-pickup

- High pH to improve corrosion resistance in primer systems
 - Excellent in high foot traffic areas like industrial floor and exterior deck coatings based on high compressive strength
 - Ideal safe filler for artist colors and hobbyist products
 - Enhanced weatherability, service life and mechanical reinforcement in roof coating formulation
