

BESTSAND™

Equestrian Sand

Powerful strides for sound performance

For over 15 years, equestrian arenas and tracks have trusted the dependable quality of BESTSAND™ EQ products, manufactured by Covia. Grounded in a 120-year heritage of excellence in pure silica sands, we have long supplied surface materials that are consistent in their physical properties, dependable in every delivery, and trustworthy for the equine athletes at the heart of the sport.

We exceed expectations through our determination to produce the best, cleanest equestrian sand. You can rely on the uniform quality and firmness for superior arena footing with horse performance and safety being the priority. No wonder arenas around the world have chosen our product for nearly two decades. Across the board, this is the fast track to the right sand.

BESTSAND™

Equestrian Sand

Superior surfaces for the equine athlete

High-purity raw sand. Our sand is fully washed and high in silica. All our equestrian sand can be used on a stand-alone basis or blended with additional amendments, based on your needs and preferences.

Proper drainage and moisture retention. The physical properties of our sand provides adequate space between granules for water to drain efficiently away from the surface, yet retains adequate moisture requiring less frequent watering.

Consistent firmness. Our high-purity sand is a subangular silica sand that is highly consistent in particle shape and size, low in bothersome dust, and high in firmness underfoot. Thus, our sand maximizes the horse's comfort, while minimizing false steps that can undermine its confidence.

Pre-blended footing solutions

Covia now offers pre-blended footing solutions at our Lugoff, SC facility. Our proprietary continuous process is a significant improvement over batch blending, improving material consistency, reducing on-site labor and simplifying arena installation. Most importantly, our blended solutions improve footing uniformity, which is better for horses and their riders.

- Reduce on-site mixing time, labor and equipment needs
- Improve consistency from truckload to truckload
- Distribute synthetic fibers evenly throughout the footing material
- Reduce clumping and support cleaner material handling and quality control
- Keep the project moving on demanding installation schedules

- BESTSAND EQ subangular grain plants
- BESTSAND EQ subround grain plants
