

GRANUSIL® DST®

Industrial Silica Treated
with Dust-Suppression Technology

Enhance worker safety, increase production efficiency

GRANUSIL® DST® treated sand with dust-suppression technology enhances worker safety and increases production efficiency during asphalt roof shingle manufacturing by significantly reducing potential exposure to silica dust. Our technology—combined with dust/vacuum collection equipment and PPE best practices—is an important part of your company’s engineering control plan for compliance with OSHA’s respirable crystalline silica regulations. This simple safety and production-efficiency solution is aligned with environmental, social, and governance (ESG) standards.

Improve air quality

During rigorous product R&D, we created a proprietary process that maintains dust-suppression integrity, regardless of the number of transfer points or amount of required handling. Our technology improves air quality throughout the entire manufacturing process unlike mechanical or isolation dust control methods that are limited to only the areas where equipment is installed.

Keep the production line running

How much of your time is allocated to plant and equipment cleaning that requires you to slow down production? Or, what about the cost of bringing in a third-party HEPA crew? GRANUSIL DST treated sand enables your production lines to run longer—boosting productivity—because less time and cost are spent on cleaning plant and equipment. All of these factors contribute to greater production efficiency and better cost controls.

GRANUSIL DST. The Simple Solution.

GRANUSIL® DST®

Industrial Silica Treated
with Dust-Suppression Technology

1 Enhance worker safety

- Significantly reduce potential exposure to silica dust
- This technology improves air quality throughout the entire manufacturing process

2 Increase production efficiency

- Increase time spent on production
- Maintain current production process
- Reduce plant, equipment cleaning downtime
- Reduce third-party HEPA cost

GRANUSIL DST
treated sand

We are committed to creating products and services that enable you to work with the highest professional and environmental standards. GRANUSIL DST treated sand with dust-suppression technology is the latest product that furthers our mission.
